

For our **CinnaCoal** project, based on typical artisanal briquette production using bamboo charcoal and binders, a **standard briquette** usually weighs:

Weight of One Briquette (Estimated):

- **Approx. 100–150 grams (0.1–0.15 kg)**

This varies depending on:

- Compression pressure
- Moisture content at pressing
- Size and shape of the mold
- Binder ratio

Packaging Assumptions Based on That:

Package Size Est. Briquettes per Pack

2 lb (≈0.9 kg) 6–9 briquettes

10 lb (≈4.5 kg) 30–45 briquettes

20 lb (≈9 kg) 60–90 briquettes

Recommendation:

You may want to **standardize one briquette at 120 grams**, which:

- Fits well within the artisanal production range
- Allows easy packaging and consistent burn time
- Makes calculations simpler for production and inventory
